

Sustainability Statement

At Media Port, we place sustainability principles at the core of our operations while conducting our activities at airport terminals and their surroundings. This drives us to comply with the environmental and sustainability rules and procedures applied by all stakeholders at the airports where we operate.

We ensure compliance with a wide range of national and international sustainability regulations, from health and safety to environmental protection, and from equality and diversity to human rights. We aim to continuously improve occupational health and safety standards, reduce our environmental footprint, and lead in waste management while considering the well-being of our employees and the community.

We prioritize achieving the requirements of ISO 50001 Energy Management System, ISO 14001 Environmental Management System, and OHSAS 18001 Occupational Health and Safety Management System.

By complying with local laws and regulations at all the airports where we operate, we provide a safe and healthy working environment. We aim to adhere to the maintenance and repair requirements established at the airports where our operations are located, as well as to regulations related to occupational health and safety, environmental and sustainability policies at every stage of our projects.

Supporting equality and diversity at every level is among our priorities, ensuring that every individual works in a fair and respectful work environment. Additionally, we strive for an ethical and fair business world by maintaining respect for human rights in all our activities.
